- One large project per week - project materials can be picked up on Saturday (9:00am-4:00pm) for the following week at Academy of Art & Design

# 2020 IMMERSION CHINESE VIRTUAL SUMMER ACADEMY

## THEME DESCRIPTIONS

### **June 8th - 12th: All About Me and My Family (Self-awareness week)**

During the first week of summer, we are concentrating on finding out more about ourselves and our families. We will create projects using art, writing and technology to help tell the story about ourselves and our family. At the end of the week, we will present our book/project to family and friends and get to know each other more.

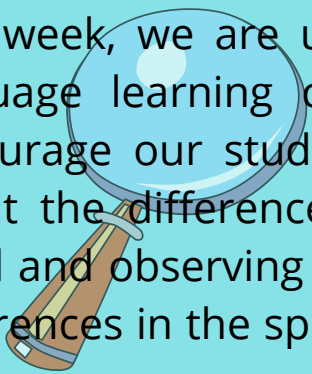

### **June 15th - 19th: Zookeeper & Animal Superpower (Animal awareness week)**

We are going to be a zookeeper, explore zoo animals and their natural habitats. Pick a favorite animal and research about your favorite animal. What is your animal's super power and favorite food? Where does your animal live? Why is it your favorite?

### **June 22nd - 26th: Detective Differences (Social awareness week)**

This week, we are using our five senses to become a detective. While language learning consists of so many different aspects of life, we encourage our students to step back and really start paying attention about the differences between China and the United States. An open mind and observing eyes are essential for the detective job. Let's put the differences in the spotlight and build a bridge to connect and understand them.

### **July 13th - 17th: Cultures Around the World (Culture awareness week)**

There are so many different countries and cultures in the world. We will be doing imaginary travels from one place to another to have fun. All activities and lessons are built about the country of the day. Let's imagine what our day will be like if we teleported to a completely different place and found ourselves living with a totally different culture.

# 2020 IMMERSION CHINESE VIRTUAL SUMMER ACADEMY

## THEME DESCRIPTIONS

### **July 20th - 24th: Hardware and Software (Technology awareness week)**

For the last decade, technology has totally turned our world upside down. What was the world like 10 years ago, how about now, or what are we predicting 10 years in the future. Learning about the past is always a good way to predict the future. As all hardware and software are changing rapidly, are we able to catch up with the thoughts of the robots? What will happen in the future?

### **July 27th - 31st: What if I am..." (Possibility awareness week)**

Exploring different careers and the basic activities that he/she does on a daily basis. Is it boring or fun for you and why? Let's pretend and play. Who says we cannot be doctors one day, and comedians another day. The best part of being a kid is we can play out all of the possibilities and no responsibilities attached yet. Let's have fun to be somebody/something; let our imagination go wild.

### **August 3rd - 7th: Aliens, Knights, Dragons, Unicorns (Fantasy awareness week)**

We all have that special imaginary animal living with us. This week, we are unleashing our inner "friends" and bring them to life. Through various art and digital projects, we will create a place where we will actually meet our friend. At the end of the week, we are presenting our own "friend" in a show and tell event.

### **August 10th - 14th: Garden Explorer - A Bug's Life (Micro-life awareness week)**

Abracadabra, you are a bug that lives in your own yard. What kind of bug will you be? How is an ordinary life like living in your own yard? Let's shrink ourselves and observe the beauties and dangers surrounding our own house through a bug's eyes. Let the magical journey begin.
